Steel Service Centre

Thessaloniki, August 2010

To whom it may concern

Letter of Reference

The company's objective is to fill a wide gap in the Greek market by introducing a service widely spread abroad (Steel Service Center). Using CNC machinery supplied by firms such as: FICEP Italy, ESAB Germany, OMSG Italy, SAVIM Italy, the company offers a complete range of services in iron processing (cutting, drilling, shot blasting, priming).

We collaborate with ASA-A.S.Anastasiadis in the field of steel structures providing to us structural consulting and constructability technical support. Working with Anthimos and his engineering team we discovered a responsible well motivated business partner with high level of scientific and practical engineering knowledge and passion to their work.

I can confidently recommend ASA as a solid and reliable associate and expert in their field.

For the company
