Dear Sir / Madam

Our company is in close collaboration with the ASA-A.S.Anastasiadis in the field of structural design especially steel and composite industrial and multistory buildings. In the same time A.S.A. provide to us consulting on different issues such as searching for new technologies and codification problems.

During our collaboration I remark a great feeling of sincerity, responsibility and passion for the state of the art and practice of engineering. Anthimos and his team dispose a high level of knowledge resolving many structural problems with an innovative mode. I consider that ASA's philosophy is based on constructability.

Our company relied on ASA for many of our most critical projects, however I can recommend, without any doubt, this firm to everyone who is implicated to civil engineering projects.

Yours faithfully,
