

Environmental Policy

The **ASAnastasiadis, ASA**, strongly recognizes the critical importance of the natural resources on earth and believes that a healthy environment is absolutely necessary for the progress of our society, people, and business framework and further on constitutes the basis of a sustainable and prosperous economy.

We take very seriously our responsibility to protect the place where we live as well as to act as an environmental stewardship through our involvement in the construction industry.

Towards this direction, we strive to:

- ❖ *Comply with the applicable legislation, national and international environmental protection systems and other requirements, including those arising from our specific area of work indentified by us.*
- ❖ *Rationally and economically utilize the resources, reduce wastages and prevent emergency conditions attributable to fire hazards.*
- ❖ *Restrain the generation of pollutants and harmful substances and make use of the best environmental practices.*
- ❖ *Effectively develop, communicate and involve employees, affiliates and strategic alliances in the implementation of the environmental control systems and improve, along with a strong promotion, of the decanting process.*
- ❖ *Consistently and continuously improve the process and procedures to safeguard the environment and prevent pollution.*

The Mangers' governance, monitoring and commitment to the clients, society and engineering community safeguard the whole process of the environmental policy.
